Project:	Iowa 2 Overflow Bridge Project
Subject:	Letting Recommendations
Date:	June 11, 2019

Background

This project has been developed in response to the flooding in 2019. The United States Army Corp of Engineers (USACE) has shown that a constriction in the floodway exists where Iowa 2 crosses the Missouri River near Nebraska City, Nebraska. A wider opening in the floodway will change the velocities of flood waters and reduce the water surface elevation within the floodway. It is connected to other planned improvements along the levee system in Iowa.

Recommendations

The primary objective of this project is to provide additional conveyance of flood waters within the Missouri River floodway by the spring of 2020. To provide the maximum time for a contractor to build the initial stages of the project, the advertising and letting period will be:

Advertising – June 18, 2019

Letting – July 2, 2019

These dates may vary a day or so, but no more.
