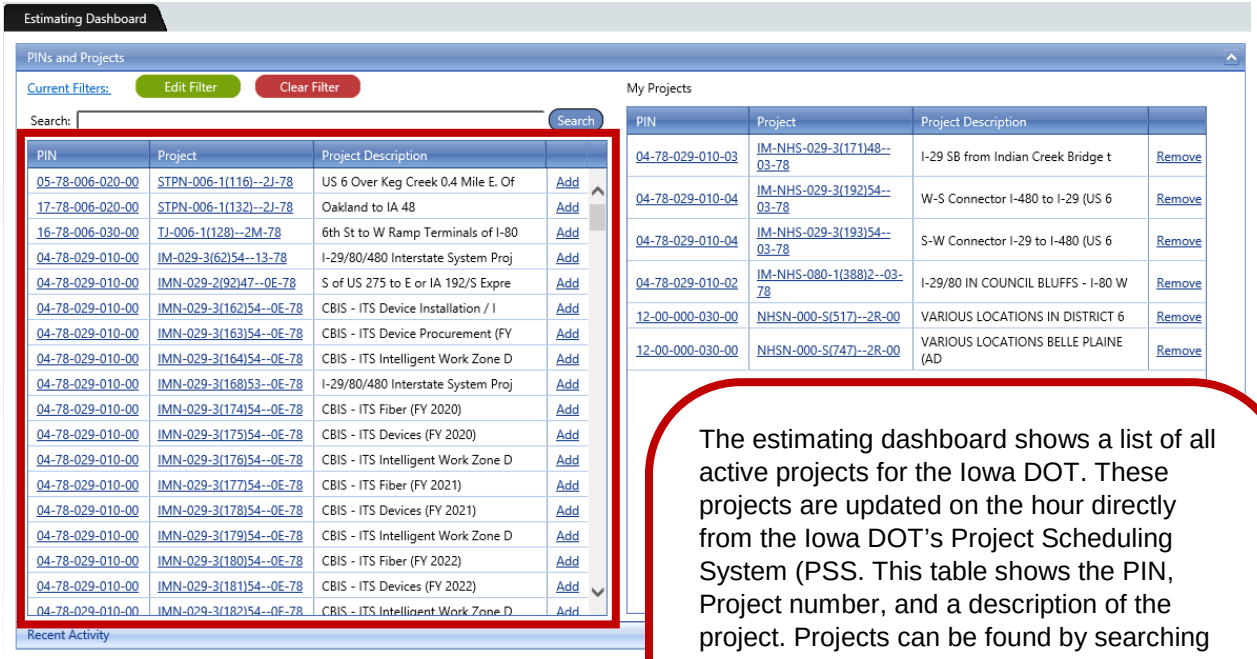
IOWA DOT

Cost Estimating

1B-1

Finding your projects

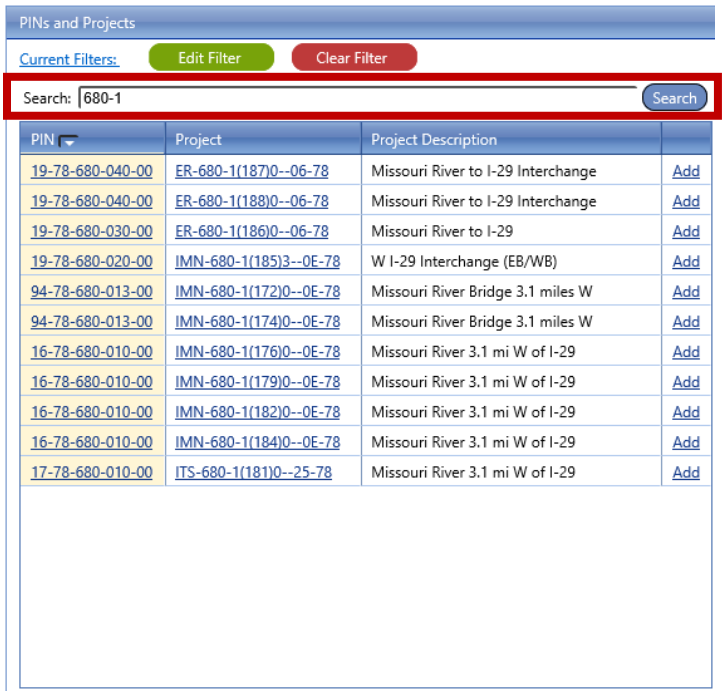
iPDWeb Cost Estimating Manual
Chapter 1
Intro to the Program
Originally Issued: 08-16-2019
Revised: xx-xx-xx



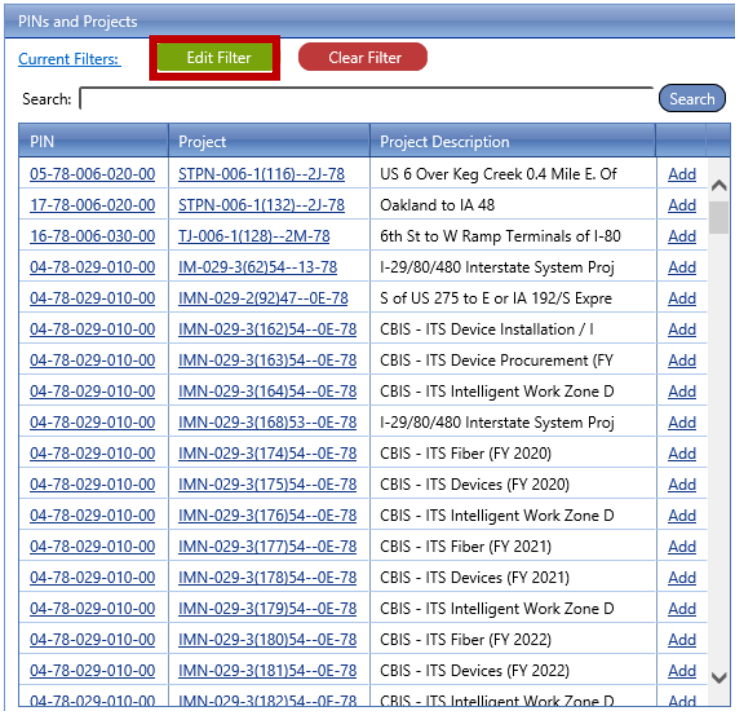
The estimating dashboard shows a list of all active projects for the Iowa DOT. These projects are updated on the hour directly from the Iowa DOT's Project Scheduling System (PSS. This table shows the PIN, Project number, and a description of the project. Projects can be found by searching through the active project list, utilizing the search feature or by creating custom filters (see chapter **1C-1: Project filters and saving short cuts**). If you do not see your project in the list, try clearing the filter to make sure you did not inadvertently have a filter applied.

To search for a project from the active projects list, simply *scroll* through the list of projects using the scroll bar on the right or by clicking on the screen under Project Description and using the scroll wheel on your mouse. Projects can also be sorted in ascending or descending order by *clicking on PIN or Project* at the top of the table.

NOTE: Before searching for a new project, *click on "Clear Filter"* to in order to obtain a complete list of active projects.



The Search feature can be used to search for PIN numbers, project numbers, or project locations or descriptions.



Custom filters can also be created to limit the list of available projects making it easier to find specific projects. The procedure for creating special filters is fully described in chapter **1C-1: Project filters and saving short cuts**.
