Use only during daylight hours. Typical applications include:
- Pavement repair
- Bridge repairs when signals are not required
- Guardrail connections at bridges
- Secondary road intersections with primary roads
- Sawing for full depth patch
- Joint sealing
- PR joints
- Surface patching
- Crack sealing

No parking on opposite shoulder within 500 feet of work area.

Ensure traffic in the open lane flows freely. Stop the first vehicle in the
closed lane from the position shown, then cross the traffic lane to stop
other vehicles.

A vehicle with an amber revolving light or amber strobe light may be
substituted for the Type III barricades.

Provide a second flagger if:
- The flagger’s view of approaching traffic in the open lane is less
  than 2 miles or the work site is in an area of restricted sight
distance, such as a No Passing zone, or
- Excessive traffic delays are encountered.

F and G distances are to remain as near minimum values as work
permits. However, to be able to move the work area without moving
the advance signing, F and G distances may be varied within the limits of
the table. Maximum movement can be achieved by setting one F or G
range at the minimum and the other value at its maximum.

<table>
