## Design Manual

Chapter 2
Alignments
Originally Issued: 09-22-00
Revised: 05-28-10

Spiral curves are generally used to provide a gradual change in curvature from a straight section of road to a curved section. They assist the driver by providing a natural path to follow. Spiral curves also improve the appearance of circular curves by reducing the break in alignment perceived by drivers. Figure 1 shows the placement of spiral curves in relation to circular curves. Figure 2 shows the components of a spiral curve.

Figure 1: Placement of spiral curve.

Figure 2: Components of a spiral curve.

## Definitions

SCS PI = Point of intersection of main tangents.
TS = Point of change from tangent to spiral curve.
SC = Point of change from spiral curve to circular curve.
CS = Point of change from circular curve to spiral curve.
ST = Point of change from spiral curve to tangent.
LC = Long chord.
LT = Long tangent.
ST = Short tangent.
$\mathrm{PC}=$ Point of curvature for the adjoining circular curve.
PT = Point of tangency for the adjoining circular curve.
$\mathrm{T}_{\mathrm{s}}=$ Tangent distance from TS to SCS PI or ST to SCS PI.
$\mathrm{E}_{\mathrm{s}}=$ External distance from the SCS PI to the center of the circular curve.
$\mathrm{R}_{\mathrm{c}}=$ Radius of the adjoining circular curve.
$D_{c}=$ Degree of curve of the adjoining circular curve, based on a 100 foot arc (English units only).
D = Degree of curve of the spiral at any point, based on a 100 foot arc (English units only).
I = Spiral arc from the TS to any point on the spiral ( $\quad=$ Ls at the SC).
Ls =Total length of spiral curve from TS to SC (typically the superelevation runoff length, see Section 2A-2 and Section 2A-3).
$\mathrm{L}=$ Length of the adjoining circular curve.
$\theta_{\mathrm{s}}$ (or Theta) $=$ Central (or spiral) angle of arc Ls.
$\Delta=$ Total central angle of the circular curve from TS to ST.
$\Delta_{c}=$ Central angle of circular curve of length $L$ extending from SC to CS.
$\mathrm{p}=$ Offset from the initial tangent.
$k=$ Abscissa of the distance between the shifted PC and TS.
$Y_{c}=$ Tangent offset at the SC.
$X_{c}=$ Tangent distance at the SC.
$x$ and $y=$ coordinates of any point on the spiral from the TS.

## Formulas

$\mathrm{D}_{\mathrm{c}}=\frac{18000}{\pi} / \mathrm{R}_{\mathrm{c}}$
$\mathrm{D}_{\mathrm{c}}=200 \times \frac{\theta_{s}}{L s}$
$L s=200 \times \frac{\theta_{\mathrm{s}}}{\mathrm{D}_{\mathrm{c}}}$
$\theta_{\mathrm{s}}=\frac{L s \times D_{c}}{200}$
$\Delta=\frac{180 \times \mathrm{L}}{\pi \times \mathrm{R}_{\mathrm{c}}}$
$\theta_{\mathrm{s}}=\frac{L s}{2 \times R_{c}}$
$\mathrm{X}_{\mathrm{c}}=\left(\frac{L s}{100}\right) \times\left(100-0.0030462\left(\theta_{\mathrm{s}}\right)^{2}\right)$
$\mathrm{Y}_{\mathrm{c}}=\left(\frac{L s}{100}\right) \times\left(0.58178 \theta_{\mathrm{s}}-0.000012659\left(\theta_{\mathrm{s}}\right)^{3}\right)$
$\mathrm{p}=\mathrm{Y}_{\mathrm{c}}-\mathrm{R}_{\mathrm{c}} \times\left(1.0-\cos \theta_{\mathrm{s}}\right)$
$\mathrm{A}=\frac{20000 \times \theta_{s}}{L s^{2}}$
$k=\frac{1}{2} L s-0.000127 A^{2} \times\left(\frac{L s}{100}\right)^{5}$
$T_{s}=\left(R_{c}+p\right) \times \tan \frac{\Delta}{2}+k$
$E_{s}=\left(R_{c}+p\right) \times \operatorname{exsec} \frac{\Delta}{2}+p$
$\mathrm{LT}=\mathrm{X}_{\mathrm{c}}-\left(\mathrm{Y}_{\mathrm{c}} \times \cot \theta_{\mathrm{s}}\right)$
$\mathrm{ST}=\frac{\mathrm{Y}_{\mathrm{C}}}{\sin \theta_{\mathrm{S}}}$
$L C=L s-0.00034 A^{2} \times\left(\frac{L s}{100}\right)^{5}$
$\Delta_{c}=\Delta-2 \times \theta_{s}$
$R_{c}$ given in feet, $D_{c}$ in decimal degrees
$\theta_{s}$ and $D_{c}$ in decimal degrees, Ls in feet
$\theta_{s}$ and $D_{c}$ in decimal degrees, Ls in feet
$\theta_{\mathrm{s}}$ and $\mathrm{D}_{\mathrm{c}}$ in decimal degrees, Ls in feet
$L$ and $R_{c}$ in feet
$\theta_{\mathrm{s}}$ in radians, Ls and $\mathrm{R}_{\mathrm{c}}$ in feet
$\theta_{\mathrm{s}}($ decimal degrees $)=\frac{180}{\pi} \times \theta_{\mathrm{s}}($ radians $)$
$\theta_{\mathrm{s}}$ in decimal degrees, Ls in feet
$\theta_{\mathrm{s}}$ in decimal degrees, Ls in feet
$Y_{c}, R_{c}$, and $p$ in feet and $\theta_{s}$ in decimal degrees

A and Ls in feet, $\theta_{\mathrm{s}}$ in decimal degrees

A and Ls in feet
$T_{s}, R_{c}, p$, and $k$ in feet, $\Delta$ in decimal degrees

Es, $R_{c}, \mathrm{p}$, and k in feet, $\Delta$ in decimal degrees, and exsec $\alpha$ is defined as $(\tan \alpha)\left(\tan \frac{1}{2} \alpha\right)$
$\mathrm{LT}, \mathrm{X}_{\mathrm{c}}$, and $\mathrm{Y}_{\mathrm{c}}$ in feet, $\theta_{\mathrm{s}}$ in decimal degrees
ST and $Y_{c}$ in feet, $\theta_{\mathrm{s}}$ in decimal degrees

LC, A and Ls in feet
$\Delta_{\mathrm{c}}, \Delta$ and $\theta_{\mathrm{s}}$ measured in decimal degrees

## Spiral Curves on Bridges

Spiral curves should be avoided on bridges. The designer should select a curve radius which doesn't require a spiral curve. The designer should contact the Methods Section for additional assistance on removing spiral curves from bridges.

## Plan Curve Data

Provide the following Spiral Curve Data on the plan and profile sheets for each spiral curve: $\Delta, \mathrm{E}_{\mathrm{s}}, \mathrm{T}_{\mathrm{s}}, \mathrm{Ls}$, $\theta_{\mathrm{s}}, \mathrm{P}, \mathrm{K}, \mathrm{X}_{\mathrm{c}}, \mathrm{Y}_{\mathrm{c}}, \mathrm{LT}, \mathrm{ST}, \mathrm{LC}$, and SCS PI stationing.

Curve data, superelvation data, and coordinates of each control point should be shown within the $G$ sheets on tabulations 101-16 and 101-17.
Spiral curve data should be displayed in following order on plan sheets:
SCS PI Sta.
$\Delta=$
Theta $=$
Ls =
Ts =
Es =
$\mathrm{P}=$
$\mathrm{K}=$
Xc =
Yc=
LT =
ST =
LC =

# Chronology of Changes to Design Manual Section: <br> 002C-001 

Add language about removing sprial curves from bridges. Removed metric formulas. Added language on displaying curve data in plans. Deleted requirement for spirials with superelevation of $3 \%$ or greater (new requirments are covered in 2A-2).
