

Ref-Map tool

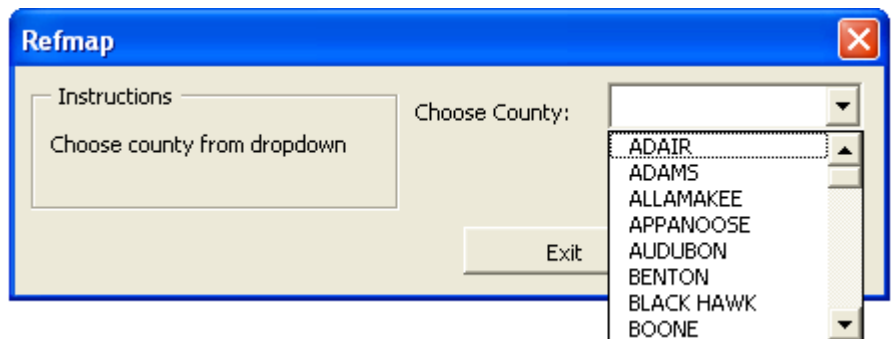

This tool can be accessed from the Geopak:
D&C Manager, as shown below:

(If the item is not found as shown, use the
D&C > Edit > Find tool to locate it.)

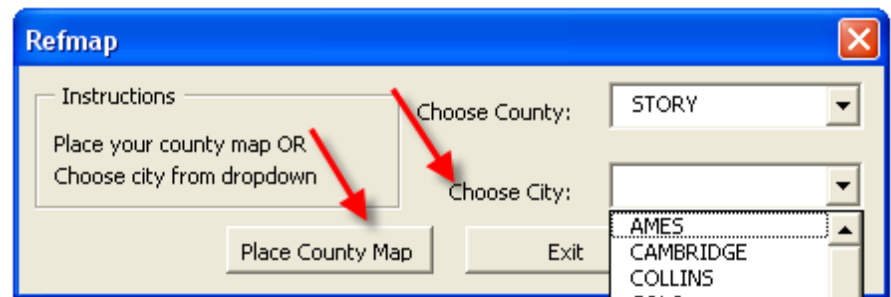

The purpose of the Map_Reference (RefMap)
Tool , or “RefMap” for short, is to attach a
County or City map reference file to a Title or
Map sheet.

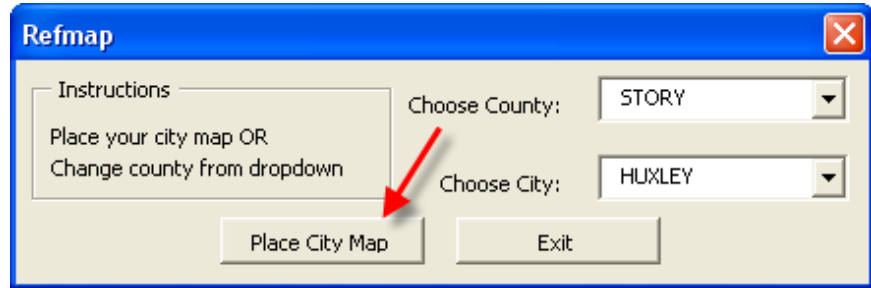

The first program dialog
instructs to choose a county
name from the “drop-down”
list, as shown at the right.

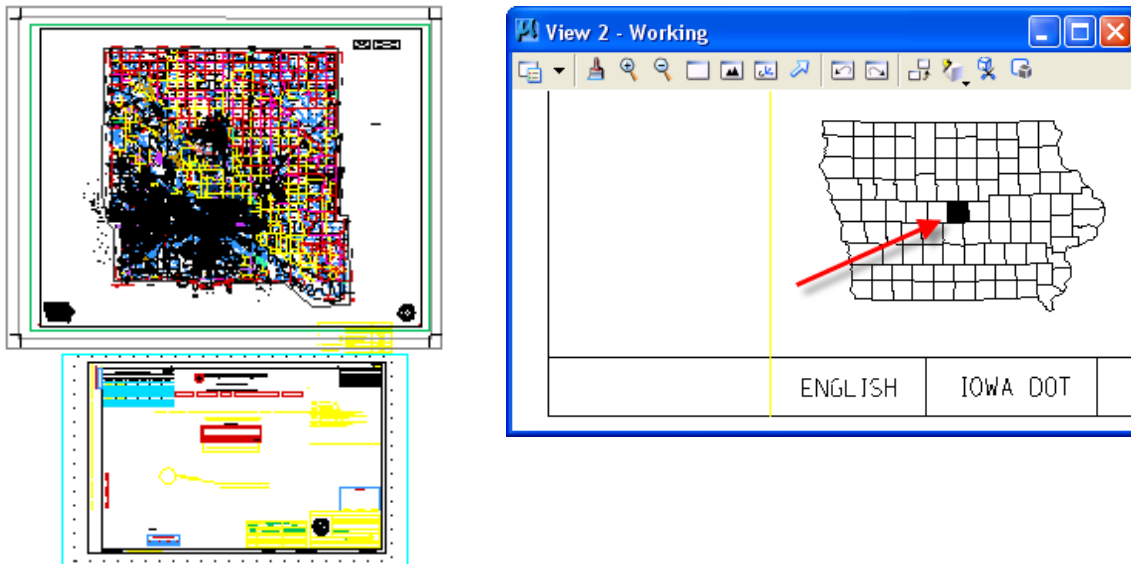

After the county name has
been selected, the dialog
changes and provides the
option to “select” a City map,
or to Place the County Map,
as shown at the right.

If a city is selected, the dialog changes and provides a button to Place City Map.

When the command is issued to “Place...” a map, the map is referenced and scaled to fit a standard Title Sheet, and attached immediately above the standard Title Sheet location in the file, as shown below at the left. The “RefMap” program also automatically displays the correct county in the small state map in the lower left corner of the Title Sheet and/or Map Sheet, shown below at the right.

The “*Reference > Tools > Clip Boundary*” command should then be used to “Clip” the necessary portion of the County or City map, and move it to the Title Sheet or Map Sheet.
