

Axle Weight Restrictions For PCC Pavement		
Pavement Thickness*	Single Axle w/2 Tires	Single Axle w/Dual Tires
150 mm & 162.5 mm (6 inch & 6.5 inch)	905 kg (2,000 pounds)	1 810 kg (4,000 pounds)
175 mm & 187.5 mm (7 inch & 7.5 inch)	1 358 kg (3,000 pounds)	2 716 kg (6,000 pounds)
200 mm (8 inches)	1 810 kg (4,000 pounds)	3 629 kg (8,000 pounds)
<p>*In determining appropriate pavement thickness to be used in this table, the pavement edge thickness should be used for a variable depth pavement design and for unbonded PCC overlays. The thickness of the composite pavement design should be used for bonded PCC overlays.</p>
