

iPDWeb Alternate Containers

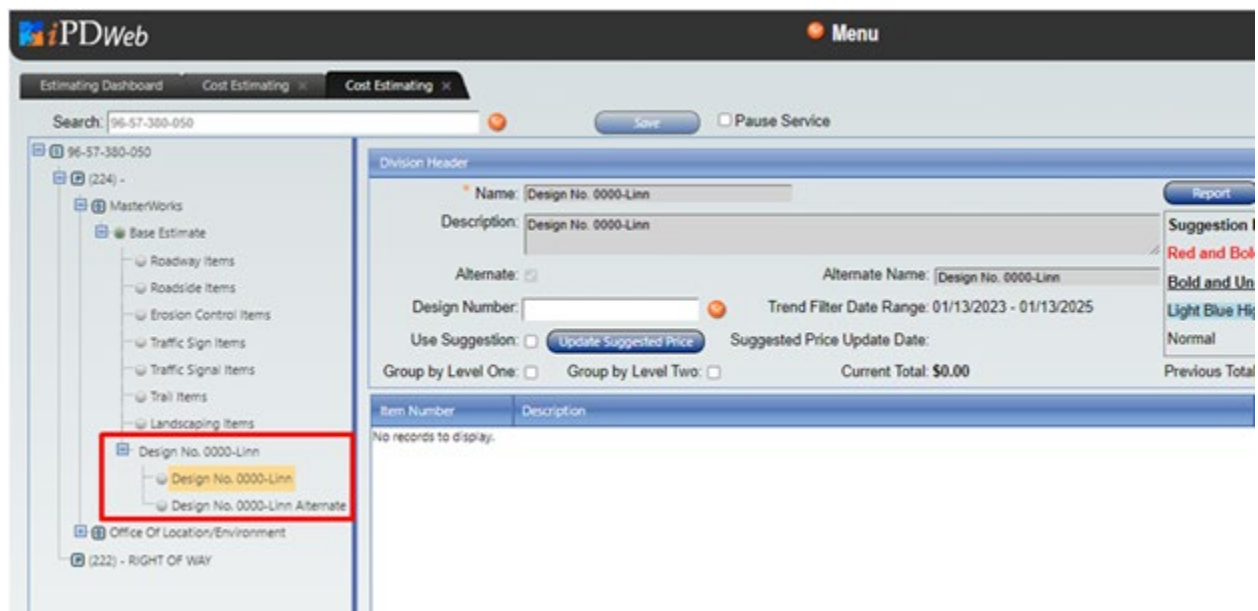

Project and Program Delivery Manual
Chapter 5.2

Setting up a New Estimate

Originally Issued: 02-25-25

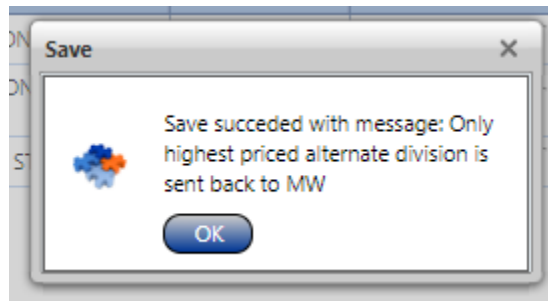

Revised: 09-03-25

iPDWeb will transmit the cost estimate associated with the most expensive alternate container to Masterworks. Alternate containers must be set up correctly in Masterworks as shown in Chapter 5.2.1.2.5 for this functionality to work properly. When set up correctly, the iPDWeb folder structure for alternate containers should look similar to the image below.

Plan items should be added to each alternate container following the steps outlined in Chapters 5.2.1.3 and 5.2.2.3. After the plan items have been successfully added and unit prices assigned, it is time to transmit the updated estimate to Masterworks. Each alternate container must be marked complete in iPDWeb to successfully transmit the cost estimate. Refer to Chapter 5.2.2.2 for instructions on how to mark estimates complete in iPDWeb.

After marking the alternate containers complete and clicking “Save”, the following message will be displayed.

This message notifies the estimator that the highest priced alternative was transmitted to Masterworks. Click OK when finished.

Note: Alternate containers must be set up correctly in Masterworks. Refer to Chapter 5.2.1.2.5 for instructions.

Chronology of Changes to Manual Section:

5.2.2.2.5 Estimate Items and MW Connections

02/25/2025	NEW
07/28/2025	Corrected "Originally Issued" date. Removed broken hyperlinks.
09/03/2025	Removed Header on pages. Checked Accessibility.
