

Iowa Department of Transportation

August, 2011

Dear Rural Road Safety Stakeholder,

You are receiving these safety education materials because - *YOU can help prevent rural road crashes.*

Who should use these materials?

- The target audience is anyone who uses Iowa rural roads, and especially teen drivers who are the most at-risk rural road drivers.
- Driving instructors, parents, law enforcement and other rural road stakeholders may also use this kit to help change how drivers think about the risks and responsibilities of driving on rural roads.

What is in the kit?

1. **Rural Road Crashes - They're Preventable**
10 minute DVD
2. **Discussion Guide:**
 - a. Rural road safety facts
 - b. Categorical listing of risk factors
 - c. Additional driving tips and what to watch for when driving rural roads
3. **Quiz:**
 - a. Motivates and confirms comprehension
4. **Coaching Guide:** (For instructors, parents and others)
 - a. Key concepts and specific facts for safe driving on rural roads
 - b. Training methods
 - c. Rural roads driving checklist to support more intentional rural roads practice driving and training for new drivers during their supervised learning period

Why is this important?

*Roughly one-half of Iowa's crash fatalities occur on local roads.

*The **most** dangerous activity for teens is driving or riding in a vehicle.

*Motor vehicle crashes are the cause of more than forty percent of all Iowa teen deaths.

What else is available?

References to other sources and downloadable documents are included in the kit. These are available online on the Iowa DOT "Safety and Education" web page at: www.iowadot.gov/mvd/ods/RuralRoadCrashes

It's Preventable tips cards can also be ordered at (515) 725-6123.

Questions?

Please e-mail ods@dot.iowa.gov or call (515) 237-3180.

This kit is the product of multi-disciplinary collaboration among safety stakeholders who work passionately to reduce injuries and deaths on Iowa roads. For more project details, refer to page two.

Iowa's Traffic Safety Collaboration Background

Rural Road Crashes - They're Preventable

Compelling Facts Motivate Stakeholder Organizations

- “Rural Roads” were identified as a priority area during the development of the **2007 Iowa Comprehensive Highway Safety Plan**, (www.iowadot.gov/traffic/chsp). Crash analysis revealed that about one-half of Iowa's annual roadway fatalities occur on local systems. The CHSP and Iowa Traffic Safety Alliance (ITSA) Rural Roads Action Team identified and moved to implement two strategies to address injuries and deaths in this category:
 - **Data Analysis: Safety Analysis of Low-Volume Rural Roads in Iowa** research project
This robust analysis of crash data revealed some distinct patterns of demographics and road features most common in rural road crashes. The study clearly showed young drivers are the most at-risk on rural roads.
 - **Raise public awareness of rural roads risk: Rural Road Crashes - They're Preventable** video project
Discussion among a wide range of safety practitioners revealed that a) many driver education courses provide little exposure to gravel and rural roads and b) Iowa drivers in general are not aware of gravel road speed limits, how risky rural roads are, and the extensive rural road factors to be mindful of when driving rural roads. This video project supports efforts to raise public awareness in communities and among all drivers.
- The **Iowa Center for Agricultural Safety and Health Iowa (I-CASH)** identified reducing agriculture-related injuries and deaths from rural road crashes as a top priority for their organization. I-CASH took the lead in this collaborative video project. www.public-health.uiowa.edu/icash/programs/rural-roadway-safety-video-project

Multi-Disciplinary Rural Roads Safety Team

A large multi-disciplinary group of forty-five state and local agricultural safety, engineering, enforcement, injury prevention, and education practitioners from many organizations met to define a shared approach to raising awareness of rural roads safety. The information was assimilated and a smaller group was formed to complete the project.

Project Team, Funding, and Resources

ICASH led the project with funding from Iowa DOT (Safety Management System) and a grant from Great Plains Center for Agricultural Health. An Iowa creative services agency produced the video. The Iowa DOT, the Governor's Traffic Safety Bureau, the Iowa Traffic Safety Alliance and others provided additional support. As the project neared completion, the team worked closely to maintain curriculum content consistency with the Iowa Driver's Manual and driver education materials, as well as engineering and law enforcement experts. Iowans who “played themselves” in the DVD include an adult, both rural and urban teens, a farmer, a sheriff's deputy and a county engineer. Additional contributing stakeholders are recognized in the printed materials and DVD credits.

Target Audience Reviews

The early draft video was screened by safety practitioners, middle school and high school students, and a law enforcement audience. The video and draft curricula were pilot tested with driver education instructors at a DOT sponsored conference in April, 2011.

Distribution

Driver education instructors and other educators are the primary distribution groups. Participating stakeholder groups represented in the initial multidisciplinary team are included because they have local and statewide audiences they may influence. Because many venues do not have internet access, over 500 educators; licensing outreach staff; agriculture resource, extension, and youth programs; state and local law enforcement education officers and others will receive the initial 2011 distribution. Materials are also available for direct download. Printed curriculum copies can be made from the PDF masters available at www.iowadot.gov/mvd/ods/RuralRoadCrashes.
