IOWA'S ELECTRIC VEHICLE INFRASTRUCTURE DEPLOYMENT PLAN FACTSHEET | MAY 2022

As part of the 2021 Infrastructure Investment and Jobs Act (IIJA), federal funds were authorized to support the continued development of electric vehicle (EV) chargers.

As a result, Iowa is joining many other states in developing plans to create a EV charging network along highway and interstate corridors. This network will offer convenient EV charging opportunities and facilitate a more reliable travel network for EVs within the state, as well as across the country.

BACKGROUND

The Iowa Department of Transportation (DOT) is preparing a plan for developing EV charging infrastructure across the state highway and interstate system. This plan will build upon guidance from both the *Iowa In Motion Long Range Transportation Plan and State Freight Plan,* as well as the 2019 Charging Forward: Iowa's Opportunities for Electric Vehicle Infrastructure Support Study.

In Iowa we want to pursue every tool in the toolbox to address our energy independence. That includes biofuels and initiatives like this Electric Vehicle Infrastructure Deployment (EV Plan). Iowa has seen steady growth in EV travel and development of fast charging stations along key highway corridors. This planning process, and subsequent funding through IIJA, allows the state to continue infrastructure development initiatives.

IOWA'S AVAILABLE FUNDS

Federal Fiscal Year 2022 Funding \$7.6 million

5-Year National Electric Vehicle Infrastructure Federal Funding \$51.4 million

DRIVING GROWTH

\$

U.S. electric car sales jumped to a record high of **over 200,000 vehicles in Q1 2022.** EV sales continue to grow in the U.S. as automakers build more options and consumers drive the demand.

With statewide growing adoption, **9,400 EVs** and hybrid vehicles were registered in Iowa as of April 2022–at least one was registered in every county.

To support this growth, Iowa has **270 EV** charging locations (Level 2 and 3) across the state for public use.

IOWA'S ELECTRIC VEHICLE INFRASTRUCTURE **DEPLOYMENT PLAN FACTSHEET** | MAY 2022

Iowa is a proud and nationally recognized leader in renewable energy and biodiesel and ethanol production. (POWER PROFILE Our state has made a significant investment in renewable fuels infrastructure. State leaders, local communities, private companies, and utilities are making solid progress to add electric vehicle infrastructure to our diverse fuel mix. Iowa will remain unwavering in our support for varied fuel resources and associated infrastructure, including ethanol, biodiesel, propane, renewable natural gas and electric.

ELECTRIC VEHICLES IN IOWA

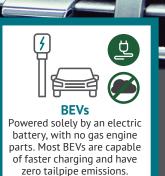

75% As of April 2022, an estimated 9,400 electric vehicles are registered in Iowa. The Iowa DOT estimates 5,000 represent all electric and 4,400 plug-in hybrid vehicles. To support the growing popularity for EV's in Iowa, over 270 public charging stations are available, representing Level 2 or Level 3 fast charging stations.

HEVs

Low-emission vehicles that use an electric propulsion system to assist liquid fueled engines. Cannot plug-in to charge.

Similar to a hybrid, but with a larger battery and electric motor. Has a fuel tank and a charging port.

FCEVs Powered by electricity using a fuel cell powered by hydrogen. FCEVs do not plug-in for charging and have zero tailpipe emissions.

15:43

HYBRID ELECTRIC VEHICLES (HEVS)

Hybrid EVs pair a conventional internal combustion engine that typically runs on gasoline, ethanol, diesel or biodiesel with an electric propulsion system. The internal combustion engine provides most of the vehicle's power, while the electric motor assists the engine with the goal of increasing fuel efficiency. Hybrids do not have the ability to plug in and recharge.

PLUG-IN HYBRID ELECTRIC VEHICLES (PHEVS)

Similar to a Hybrid EV, PHEVs have an on-board battery and an internal combustion engine. However, the battery on a PHEV is generally much larger, which allows the

VEHICLE TYPES HYBRID & ELECTRIC

vehicle to run entirely off of electricity during shorter trips. The vehicle can also use liquid fuel, like gasoline or diesel, to provide a longer driving range for extended trips. These vehicles can be plugged into an electric power source to charge the battery.

BATTERY CHARGING

ALL-ELECTRIC OR BATTERY ELECTRIC VEHICLES (BEVS)

BEVs use a battery to store the electric energy that exclusively powers the motor. The BEV's battery is charged by plugging the vehicle into an electric power source.

FUEL CELL **ELECTRIC VEHICLES (FCEVS)**

FCEVs are Zero-Emission Vehicles. They employ fuel cell technology to generate electricity required to move the vehicle. FCEVs are powered by hydrogen and produce no tailpipe emissions – only warm air and water vapor.

NATIONAL ELECTRIC VEHICLE INFRASTRUCTURE PROGRAM (NEVI)

In February 2022, guidance was issued for the National Electric Vehicle Infrastructure (NEVI) Program, which provides federal funds for strategic deployment of an electric vehicle (EV) charging infrastructure.

The NEVI Program provides up to \$7.5 billion to make EV chargers accessible for public use by establishing a nationwide

ALTERNATIVE FUEL CORRIDORS are federally designated routes on major highways that allow for inter-city, regional, and national travel using lower-emission vehicles. In Iowa they are Interstates 29, 35, 80 and 380.

interconnected network across the U.S., located primarily along alternative fuel corridors.

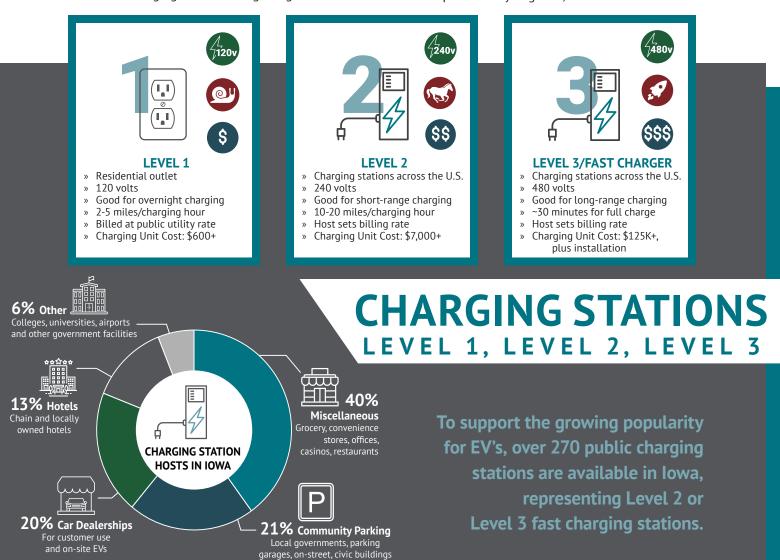

Funds include \$5 billion for the NEVI Formula Program and a \$2.5 billion discretionary grant program.

Iowa DOT has established a Joint Office to oversee development of an EV Plan for Iowa that supports these transportation electrification efforts.

NEVI funded EV Plans and charging infrastructure must:

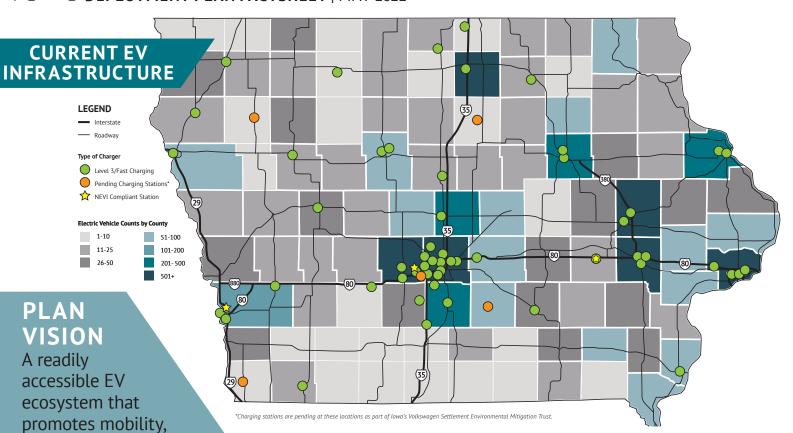

- » Use funds for EV charging stations along designated corridors

- » Connect to the electric grid and be spaced no more than 50 miles apart and less than one mile from Interstates and highway corridors
- » Be near restrooms, small businesses, and other amenities
- » Address needs for EV charging infrastructure in rural corridors and under-served or disadvantaged communities
- » Provide long-term operation and maintenance
- » Include existing EV charging infrastructure programs and incentives
- » Consider public-private or private investment partnerships
- » Allow flexibility for future upgrades based on power levels and charging speeds
- » Adhere to Joint Office of Energy and Transportation standards and requirements
- » Consider consumer protection, cyber-security, domestic manufacturing, emergency evacuation planning, environmental permitting, resilience, and terrain related issues
- » Must be submitted to the Joint Office of Energy and Transportation by August 1, 2022 to avoid forfeiture of funds

- » Be open to public and commercial fleet operators

IOWA'S ELECTRIC VEHICLE INFRASTRUCTURE DEPLOYMENT PLAN FACTSHEET | MAY 2022

PLAN TIMELINE

- » November 2021 IIJA authorizes federal funding for nationwide EV infrastructure program
- » February 2022 NEVI Program Guidance Memo issued
- » June 2022 stakeholder and public survey to gather input for Iowa's EV Plan
- » August 1, 2022 deadline to submit Iowa's EV Plan
- » Spring 2023 estimated deadline for NEVI/EV Plan approval by FHWA

sustainability for the

wellbeing of Iowa.

overall economic and social

reliability, and

An EV fast charging system that supports regional and interstate travel

lowa's communities

A charging network that helps provide the traveling public a variety of transportation and energy options

on human and environmental health

A transportation system that reduces energy life-cycle emissions to minimize impact

A local EV system that promotes equitable access and mobility throughout

A sustainable transportation and energy system that can adapt to economic, technological, and environmental changes while providing a high level of system reliability

A charging network that supports long-term EV station success which maximizes economic benefits for consumers

A growing network of chargers that fosters innovation and collaboration to expand economic opportunities
